Handover note

Ageing Navigator pilot · Version 3 · 15 October 2026

This note sums up what the pilot is, where everything lives, how to run it day to day, and what is left before the first real family. The Navigator guide explains the screens; the Privacy facts sheet explains how information is handled.

What the pilot does

1. A family starts from your website (ageingnavigator.com) or a link you give an organisation. They choose one of 8 cards ("What has brought you here?"), agree to the consent wording, and answer only the questions that apply.
2. Their Family Ageing Action Plan is built at once from your approved wording. It is shown on the thank-you page and emailed to them as a private link. There is no review step.
3. You are emailed for every new plan, and for urgent answers with "URGENT" in the subject. You can open any plan, change it and send an updated version.
4. Each plan ends with useful contacts from your list of organisations: the ones that go with its actions.
5. From their plan, the family can download a PDF, ask Ageing Navigator to help coordinate their next steps (free for the first 10 families), and say whether the plan was useful.
6. You export the results as a spreadsheet (CSV) for the pilot evaluation.

Where everything lives

What	Where	Owner
The questionnaire	https://plan.ageingnavigator.com/start	—
The privacy policy	https://plan.ageingnavigator.com/privacy (draft for your approval)	you approve, Valdis updates
Your sign-in	https://plan.ageingnavigator.com/login (paul@ageingnavigator.com)	you
Database	Supabase, project in Sydney	your account
Email sending	Resend, domain ageingnavigator.com (verified)	your account
DNS	Hostinger: four records for the address and email	your account

What	Where	Owner
Website and app hosting	Vercel	Valdis's account for now; it can move to yours
Content (questions and wording)	The content spreadsheet	you edit, Valdis imports

Links for organisations

Give each organisation its own link, so you can see where families come from. For example: `https://plan.ageingnavigator.com/start?ref=tauranga-hospital`.

- **The name:** any short name of lower-case letters, numbers and hyphens.
- **Where it shows:** on each case ("via tauranga-hospital") and in the CSV export.
- **Use the direct link:** a family who first goes to ageingnavigator.com and clicks a card there counts as "website". Give organisations the direct link, or a QR code of it.

Your website's 8 cards each have their own link, sent separately, so a family who clicks a card on your site starts with that reason already chosen.

Day to day

- **Read the new-plan emails:** open urgent cases first. They are listed first until opened.
- **Coordination requests:** mark them Contacted, then Closed. The counts feed the pilot results.
- **Updating the care home list or the useful contacts:** edit the "BOP Care Homes" or "Organisations" tab of your Repository sheet and ask Valdis to re-import it. It takes a few minutes.
- **Changing wording:**
  1. edit the content spreadsheet and send it to Valdis;
  2. it is checked and imported;
  3. plans already sent keep their wording, and "Regenerate from answers" rebuilds a plan with the new wording.
- **"Free for the first 10 families":** the wording is in the spreadsheet (Texts tab). Change it when the offer ends.
- **Deleting a family's information:** open the case and use "Delete this case now".
- **Automatic deletion:** cases are deleted 12 months after the plan was sent.

Before the first real family

Step	Who	Status
DNS records and email domain	you, with Valdis	done 13 October
Emails tested on the real address	Valdis	done 14 October
Approve the wording ("approved as it is", or changes in the spreadsheet)	you	waiting
Approve the privacy policy, and confirm the privacy officer and how to describe Ageing Navigator's relationship with Home Carers	you	waiting
Turn on approved-only mode, so only approved wording can ever be sent	Valdis	after your approval
Daily backups: upgrade the Supabase project to Pro	you	waiting
Remove the test cases and the test account	Valdis or you, with the prepared script	at launch
Change the password shared for Supabase and Resend, and turn on two-step sign-in	you	at launch
Point your website's buttons and cards to the questionnaire links	you	when ready

Known limits of the pilot

- **One region:** Bay of Plenty only.
- **Care homes only:** when residential care comes up, the plan lists up to 3 care homes from your Repository sheet (added 15 October).
  - Villages and home care providers are not matched yet.
  - Your list's "Website / Contact" column is empty, so the plan shows each home's address. Filling in a phone number or website lets the plan show it.
- **Useful contacts:** the 15 organisations in your Organisations tab.
  - Stroke Aotearoa and Parkinson's New Zealand are not shown yet, because no question asks about stroke or Parkinson's.
  - Rotorua families see only the national organisations. "Bay of Plenty" in the coverage column is read as Health NZ's Bay of Plenty district, which does not include Rotorua. Add "Rotorua" to an organisation's coverage when it serves Rotorua too.
- **"They" wording:** the questions speak about another person. A "you" version for people planning for themselves is for the full build.

- **Questionnaire version 2.1** (modules, respite and EPOA modules, paid tools) is set aside until after the pilot.
- **Technical access:** Valdis keeps technical access to the hosting and database during the pilot, to maintain them.

After the pilot

- **A summary for organisations:** the pilot records which families explored villages or residential care, their preferred areas and what mattered to them. That can become an anonymised summary to show villages and care providers.
- **The full build:** the decision rests on the pilot's results. Do families finish, do they find the plan useful, and do some ask for help coordinating?
